

SCADA & IIoT Application Development Platform

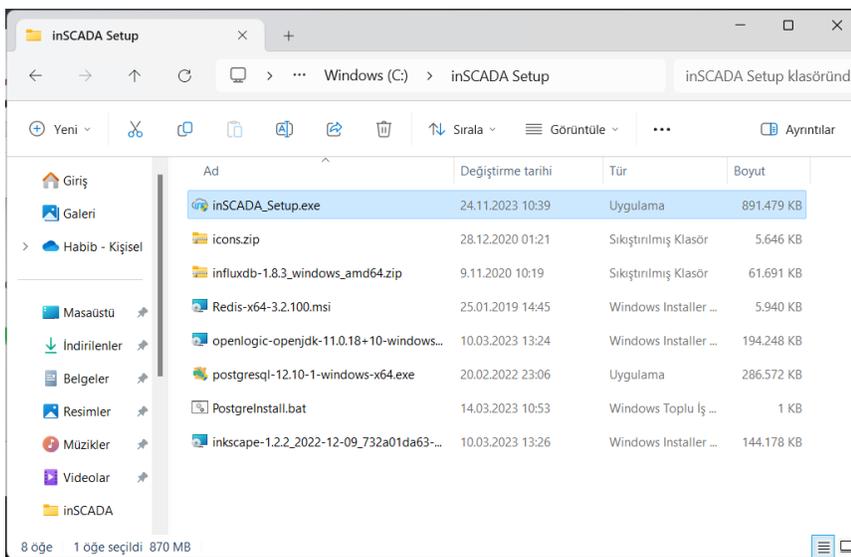

inSCADA Installation for Windows

"inSCADA is a cross-platform application. It can run on Windows or Linux operating systems. In this document, the installation steps for Windows operating system are explained."

Copy the setup file into an empty folder. When run, the installation files will be opened in this folder.

Setup is extract to these files.

- icons.zip

This file is svg library. You can open it under any folder and use it in your designs.

- influxdb-1.8.3_windows_amd64.zip

Time series database setup file. This file is installed automatically.

- Redis x64-3.2.100.msi

In-memory database setup file. This file is installed automatically.

- openlogic-openjdk-11.0.18 ..

JVM Setup file. This file is installed automatically.

- postgresql-12-10-1-windows

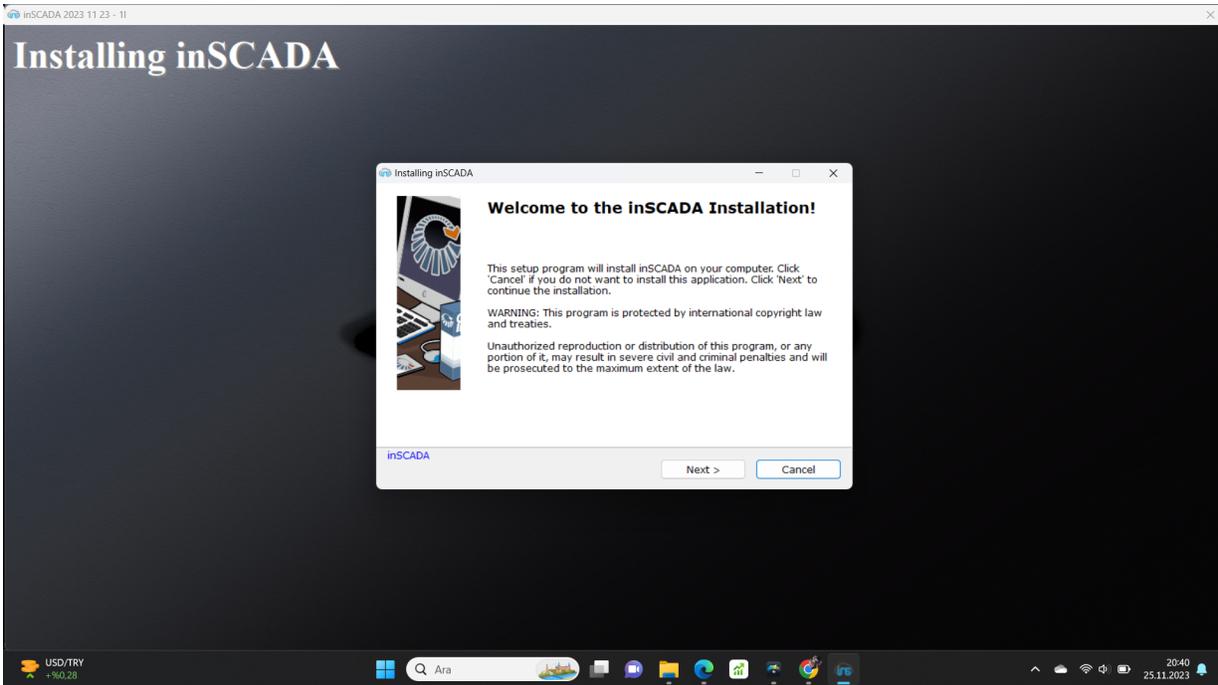

RDB setup file. This file is installed automatically.

- PostgreInstall.bat

Batch file for create database. This file is run automatically by the Install.

- inkscape-1.2.2.....

Designer application.

"To install in default settings, just press the next button."

Default settings

Installation Path : C:\Program Files\inSCADA

Influxdb (Timeseries DB) Installation Path : \ C:\Program Files\inSCADA\influxdb-1.8.3-1

PostgreSQL Port : 5432

PostgreSQL User Name: postgres

PostgreSQL Database Name : promis

PostgreSQL Database Password : 1907

influxdb Port : 8086

influxdb Database Name : inscada

influxdb User Name : none

influxdb password : none

Redis Port : 6379

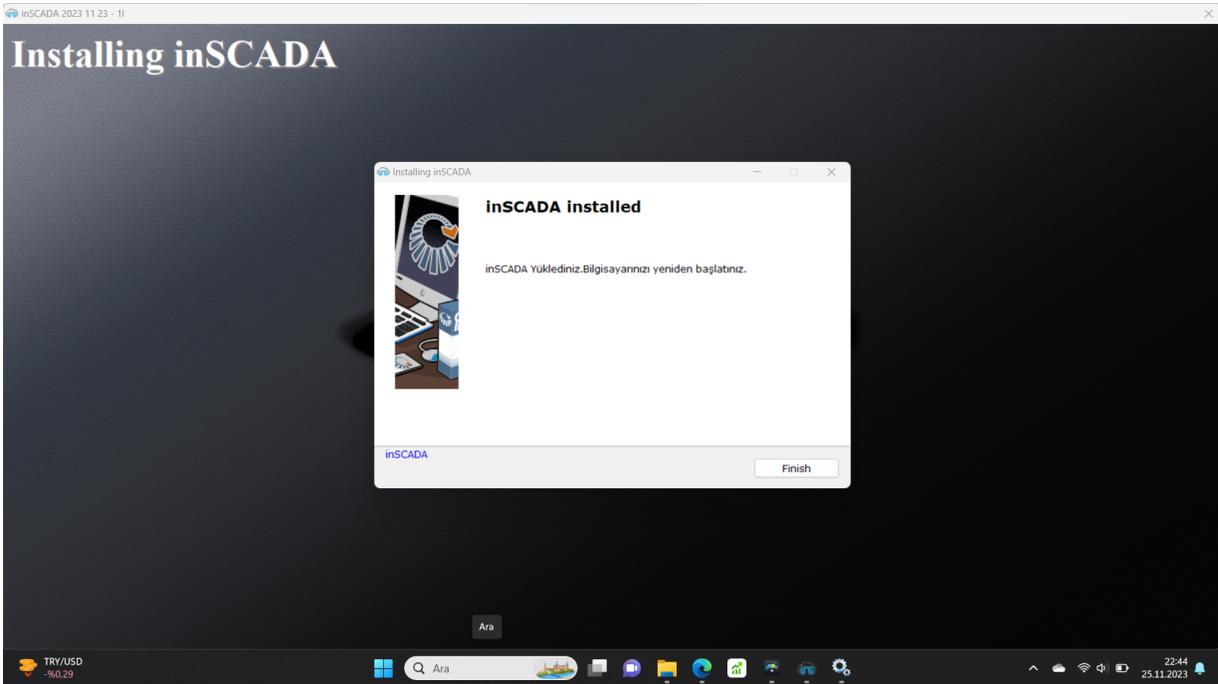

inSCADA http port : 8081

inSCADA https port : 8082

inSCADA login url : http://localhost:8081

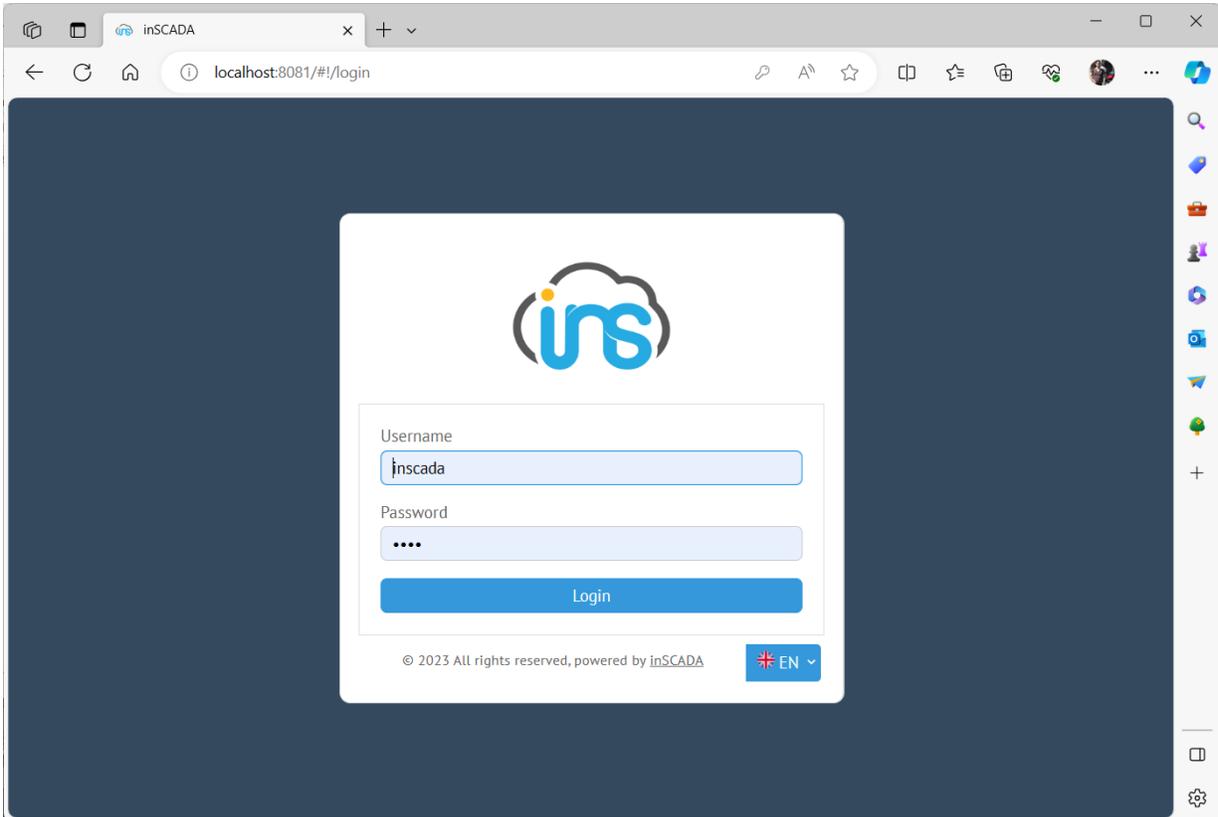

inSCADA default Admin User : inSCADA

inSCADA default Admin Password : 1907

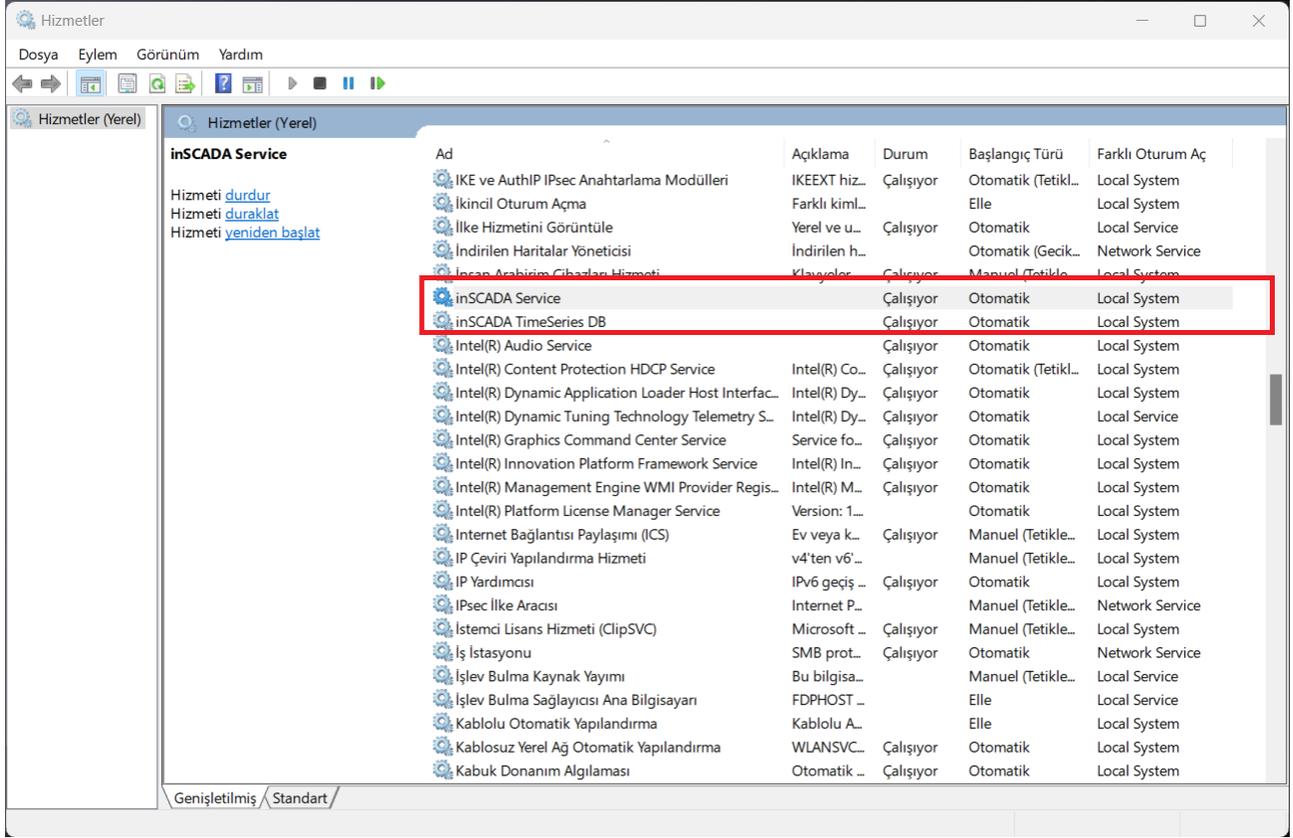

"After the installation is completed, restart your computer."

To check that the installation has been completed successfully after restarting your computer; Enter "http://localhost:8081" in the browser address bar.

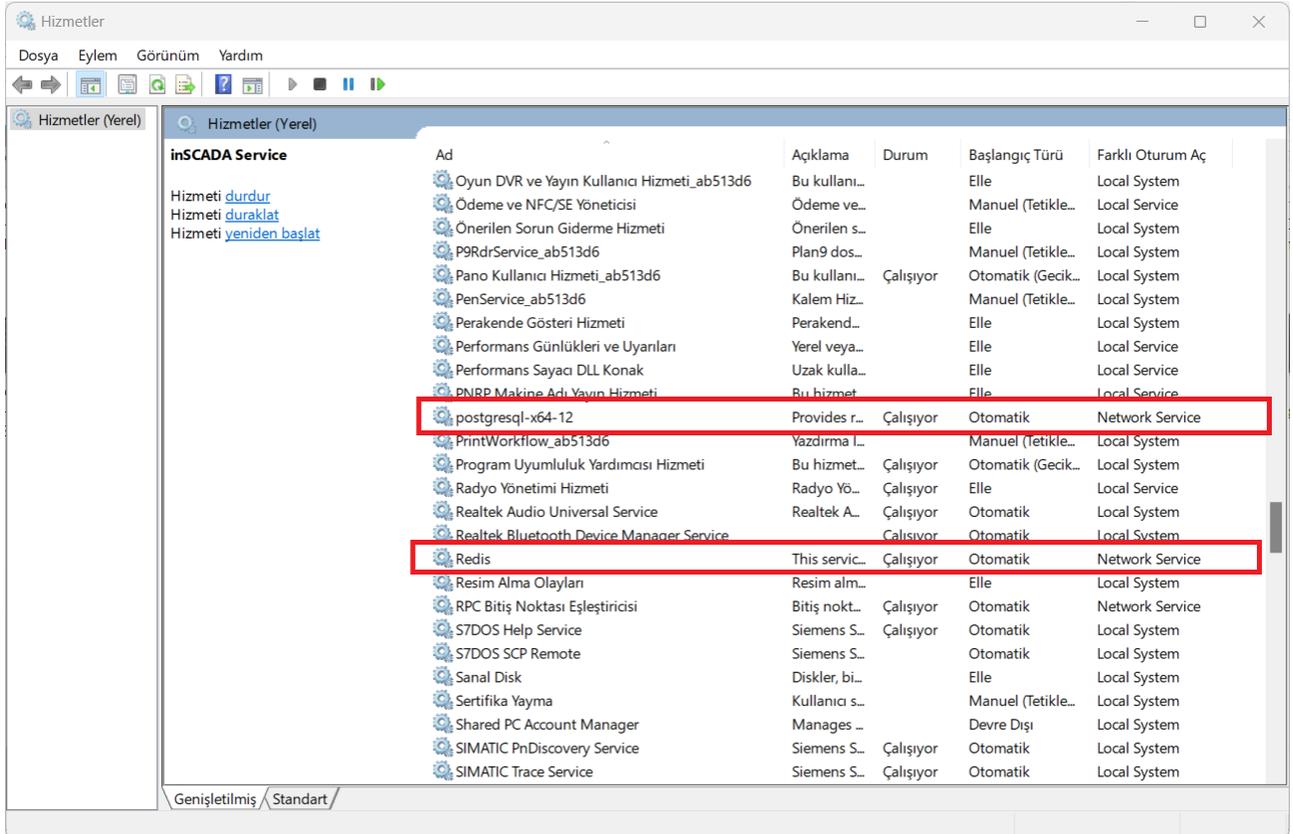

If the installation fails, check the services. Reinstall the service that is not working. Use the setup files.

The screenshot shows the Windows Services console with the following table of services:

If you have installed other than default settings, you may need to change the inSCADA startup parameters.

To change inSCADA Startup parameters, use the following command on the command line.

nssm edit "inSCADA Service"

Default Arguments of service :

```
-jar  
-Djava.library.path=C:\Windows\system32  
-Dspring.profiles.active=production  
-Djava.io.tmpdir=%tmp% -Dins.files.path="C:\Program Files\inSCADA\files"  
"C:\Program Files\inSCADA\inscada.jar"
```

Scheme of Startup parameters

spring:

datasource:

driver-class-name: org.postgresql.Driver

jdbc-url: jdbc:postgresql://localhost:5432/promis

username: postgres

password: 1907

hikari:

maximum-pool-size: 25

redis:

host: localhost

port: 6379

influxdb:

database: inscada

url: http://localhost:8086

servlet:

multipart:

max-file-size: 50MB

max-request-size: 50MB

data:

web:

pageable:

max-page-size: 10000

server:

port: 8082

http:

port: 8081

ins:

files:

path: ./fs

notification:

period: 500

For example : We want to change the Postgresql port to 5433

To do this, we need to change the jdbc-url parameter.

Default parameters : jdbc-url: jdbc:postgresql://localhost:5432/promis

new parameter : -Dspring.datasource.jdbc-url = jdbc:postgresql://localhost:5433/promis

We need to add the new parameter to the service argument.

```
-jar -Dspring.datasource.jdbc-url = jdbc:postgresql://localhost:5433/promis  
-Djava.library.path= C:\Windows\system32 -Dspring.profiles.active=production  
-Duser.timezone=Europe/Istanbul -Djava.io.tmpdir=%tmp%  
-Dins.files.path="C:\Program Files\inSCADA\files"  
"C:\Program Files\inSCADA\inSCADA.jar"
```

For example : We want to change the Time Zone !

To do this, we need to change the user.timezone parameter.

Default parameters : user.timezone=Europe/Istanbul

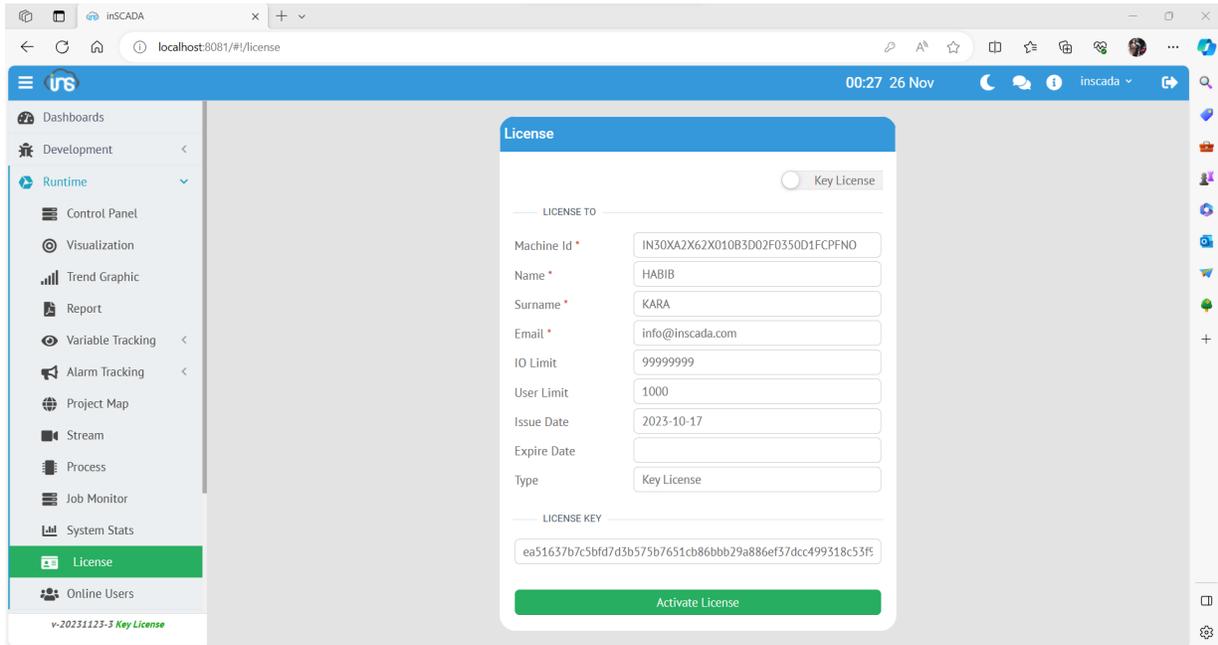

new parameter : -Duser.timezone=America/Los_Angeles

We need to add the new parameter to the service argument

```
-jar -Dspring.datasource.jdbc-url = jdbc:postgresql://localhost:5433/promis  
-Djava.library.path= C:\Windows\system32 -Dspring.profiles.active=production  
-Duser.timezone=America/Los_Angeles -Djava.io.tmpdir=%tmp%  
-Dins.files.path="C:\Program Files\inSCADA\files"  
"C:\Program Files\inSCADA\inSCADA.jar"
```

Licensing

After logging into the inSCADA Platform via a browser, click on the "Runtime - License" menu. Send the machine ID to info@inscada.com from the interface that opens. Your license information will be sent to you as soon as possible.

Note :

inSCADA will be installed as demo by default. In demo mode, the application will restart every 15 minutes. Therefore, you must log in to the system every time.

Default login user name: inscada password: 1907

For further assistance, you can send an e-mail to info@inscada.com. You can also review these links.
